

Remote Printer Driver Server

ABSTRACT OF THE DISCLOSURE

A system for printing application data comprising a client originating the application data and a printer driver server, remotely connected to the client, which receives the application data. The printer driver server includes a database containing a plurality of printer drivers and a transcoder. The transcoder transcodes the format of the received application data to a printer format using one of the printer drivers retrieved from the database and transmits the application data in the printer format to a printer.
